Problem Statement

Colleges handle large volumes of information related to students, departments, faculty members and courses. Managing these records manually or using disconnected files can lead to data duplication, inconsistency and difficulty in retrieving related information.

The **Student And College Management System** provides a centralized database to organize and manage academic information efficiently and maintain data integrity.

OBJECTIVES

- Maintain student and faculty records

- Manage departments and courses

- Track student course enrollments

- Maintain relationships between different entities

- Support CRUD operations

- Generate useful academic reports

SYSTEM SCOPE

The system focuses on the core academic structure of a college. It maintains information about students, faculty, departments and courses, and the relationships between them to support efficient management and retrieval of academic data.

RELATIONSHIP

Represents the relationship between **STUDENT** and **COURSE**.

MAIN ENTITIES

COLLEGE

Stores details of the college.

DEPARTMENT

Stores departments under a college.

STUDENT

Stores student information.

FACULTY

Stores faculty information.

COURSE

Stores courses offered by departments.

THANK YOU

Student and College Management System
